

Thank you for your order!
For a detailed Pixelblaze setup guide and more info, please check out my website:
<http://bhencke.com/pixelblaze>

When you power up your Pixelblaze, it will go in to WiFi setup mode. Look for a new wireless network called pixelblaze_XXXXXX. Once you connect, you should automatically see the setup page. If not, go to <http://192.168.4.1>

If you enable the cloud discovery service, you can find your Pixelblaze by visiting <http://discover.electromage.com>
If using AP Mode to create a new WiFi network, choose a password at least 8 characters long (fewer characters wont work). Then you can always find it at <http://192.168.4.1>

If you need to go back to setup mode, supply power, then press and hold the button for 5s. Shorter presses can be used to switch patterns!
